Appendicitis	2.00
Asthma	1.94
Cancer	5.59
Diabetes	3.44
Heart Failure	5.00
Total	3.60

1. [Distribution of Admission Type](#)

The pie chart shows the proportion of patients by admission category:

- **Emergency Admissions:** 59 patients (**39.1%**)
- **Elective Admissions:** 50 patients (**33.1%**)
- **Urgent Admissions:** 42 patients (**27.8%**)

2. [Count of Patients by Medical Condition](#)

The bar chart displays the number of patients diagnosed with various medical conditions.

- Diabetes is the most common medical condition among patients, accounting for approximately double the count of most other conditions.
- Other conditions are relatively evenly distributed, indicating balanced occurrence rates across the healthcare dataset.

3. [Test Results Distribution](#)

The donut chart summarizes patient test outcomes:

- **Abnormal Results:** 67 patients (**44.4%**)
- **Normal Results:** 67 patients (**44.4%**)
- **Inconclusive Results:** 17 patients (**11.3%**)

4. [Count of Admissions by Hospital](#)

The pie chart compares admissions across hospitals:

- **City General:** 51 admissions (**33.8%**)
- **Metro Health:** 50 admissions (**33.1%**)
- **Regional Med:** 50 admissions (**33.1%**)

5. [Average Days Spent by Hospital](#)

Regional Med has the highest average patient stay.

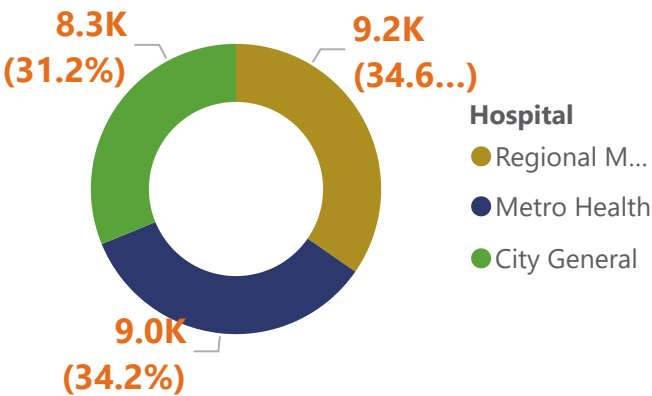

City General has the shortest average stay duration.

The overall average hospitalization duration is approximately 3.6 days.

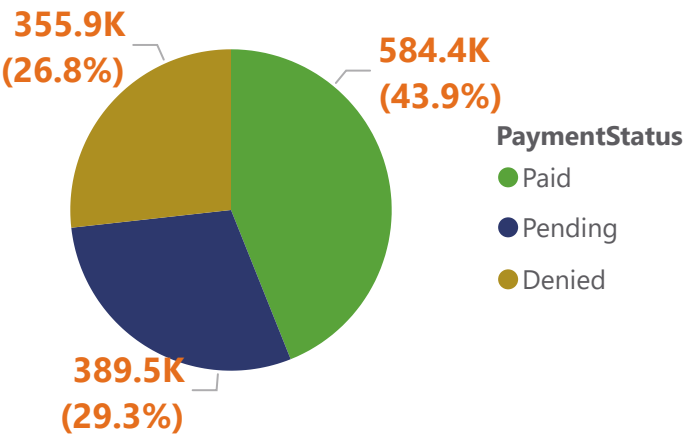

6. [Average Days Spent by Medical Condition](#)

- Cancer patients experience the longest hospital stays.
- Heart Failure patients also require extended hospitalization.
- Asthma and Appendicitis patients have the shortest stays.

1. Average Billing Amount by Hospital

The donut chart compares the average billing amounts across hospitals.

- Regional med has the highest average billing amount.
- City General has the lowest average billing amount.
- Billing values are relatively balanced across hospitals.

2. Average Billing Amount by Procedure Code

The bar chart shows billing variations across procedure codes.

- Procedure code **99225** generates the highest average billing amount.
- Billing amounts increase progressively across procedure levels.
- High-complexity procedures contribute significantly to revenue generation.

3. Average Revenue by Doctor

The funnel chart compares average revenue generated by doctors.

- Dr. Kim generates the highest average revenue.
- Dr. Patel records the lowest revenue among the listed physicians.
- Revenue differences may reflect:
 - Patient volume
 - Procedure complexity
 - Specialty services

4. Total Revenue by Payment Status

The pie chart categorizes total revenue according to payment status.

- Paid claims account for the largest revenue share.
- Nearly 56% of revenue is either pending or denied.
- Denied claims represent a substantial financial concern.

5. Average Billing Amount by Medical Condition

The chart compares billing amounts across medical conditions.

- Stroke treatment incurs the highest billing costs.
- Cancer and Heart Failure also generate significant healthcare expenses.
